

ABSTRACT

The invention relates to a polycarbonate resin composition favorable for parts of electric and electronic appliances. The composition comprises (a) from 65 to 95 % by weight of a polycarbonate resin, (b) from 3 to 20 % by weight of glass having a refractive index of from 1.570 to 1.600, and (c) from 2 to 15 % by weight of a plasticizer, or is prepared by adding (a) from 0.01 to 5 parts by weight of metal-coated glass flakes, and (b) from 0.01 to 2 parts by weight of at least one stabilizer selected from phosphites, hindered phenolic compounds, epoxy compounds and benzotriazole compounds, to 100 parts by weight of a polycarbonate resin.
